

SL-120 Series Stacklights

Wiring Instructions

These stacklight modules are twist-lock assembled. Remove the bottom base module and unsnap the wire terminal to access it.

"C" terminal is Common to all connected modules.
Numbers 1 through 5 refer to the modules,
in order from the base to the top.

C = Common (Neutral)
1 = 120VAC for first module
2 = 120VAC for second module
3 = 120VAC for third module
4 = 120VAC for fourth module
5 = 120VAC for fifth module

Mounting Instructions

Two mounting adaptors are included with each base.

For panel-mount installation: Use the black anodized fitting.

1. Slide the unthreaded end securely into the bottom of the base module.
2. Tighten the binding screw on the inside of the base to secure it in place.
3. Use the two included nuts to hold stacklight in place on a panel or conduit box.

For pole-mount installation: Use the compression fitting.

1. Screw the 1/2" NPT threads of the compression fitting firmly into the bottom of the base module. The base is not threaded but the fitting will "cut" threads, holding it firmly in place. A watertight seal can be made with the use of a silicone adhesive or other sealant.
2. The assembled unit can now be installed onto 1/2" EMT conduit.
